                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          formation. Appears early in primordial forms of cell junctions recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in Platelet activation.

SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this interaction (By similarity). Interacts with the ninth PDZ domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GO:0005911; C:intercellular junction; TAS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              formation. Appears early in primordial forms of cell junctions recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation.

SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this interaction (By similarity). Interacts with the ninth PDZ domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PTM: N-Glycosylated.

SUBCELLULAR LOCATION: Type I membrane racalized at tight junctions of both (
                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: Seems to plays a role in epithelial tight junction formation. Appears early in primordial forms of cell junctions recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation. SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this interaction. Interacts with the ninth PDZ domain of MPDZ (By interaction). Interacts with the ninth PDZ domain of MPDZ (By

                                                                      FUNCTION: Seems to play a role in epithelial tight junction formation. Appears early in primordial forms of cell junctions recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly. Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation (By similarity). The association between PARD3 and PARD6B probably disrupts this interaction. Interacts with the first PDZ domain of PARD3. The association. Interacts with the first PDZ domain of MPDZ (By interaction. Interacts with the first PDZ domain of MPDZ (By
                                           interaction. Interacts with similarity).
SUBCELLULAR LOCATION: Type
               Localized at tight jucells (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

FUNCTION: Seems to plays a role in epithelial tight junction formation. Appears early in primordial forms of cell junctions recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly. Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier.
                                                                                                                  as
